

S9III PLUS

GNSS RECEIVER FOR PROFESSIONAL SURVEYORS

EVOLUTION IN PROGRESS

S9 III Plus GNSS is the result of the continuous evolution of the STONEX GPS integrated receivers. Featuring a new, high accuracy multi constellation antenna, a powerful UHF transmitter and the GSM 3G WCDMA modem, for a fully integrated communications choice, combined with a light and modern design, STONEX S9 III Plus improves the field performances, giving immediate and reliable positioning even in difficult environments. Compatible with GPS, GLONASS, GALILEO, COMPASS, no limitation will slow down your field operations.

A SCALABLE SOLUTION: NO; THANK YOU!

Fully complete are not just words: no options are available for STONEX S9 III Plus GNSS, that combines an embedded 220 channels GNSS board, accurate and fast in satellite fixing, UHF radiomodem, GSM 3G modem for GPS network connections, Bluetooth™ device for completely cable-free operations. S9 III Plus GNSS can work as Base, transmitting to one or more Rovers, and as GPS network Rover: the complete set of communications options give you a completely free operating choice from the beginning, no after sale options are requested.

TOTAL FLEXIBILITY AT YOUR SERVICE

The integrated UHF transmitting and receiving radiomodem, with output power up to 2W, makes STONEX S9 III PLUS GNSS a powerful source of GPS corrections: constructions sites, cadastral and land survey, marine and hydrographic applications, take a big advantage using one high accuracy transmitting GPS, combined with Rovers. Moreover, S9III Plus is compatible with several GPSs: Satel™ and TRIMTALK™ 450S are just some examples of the supported protocols. And where a GPS Network is available, S9 III Plus GNSS is the perfect rover, using the 3G integrated modem.

RELIABLE, FAST, CABLE FREE

The IP67 certification, combined with a high shock resistance - S9 III Plus GNSS survives even after a 2 m drop on concrete - guarantee the maximum strength and the best water/dust-tight. With its short initialization time, S9 III Plus GNSS lets you save time everyday, every job; And when the GPS signal is lost, the advanced STONEX technology used in the new S9 III Plus GNSS reduces to a moment the re-initialization time, while positioning accuracy, checked from the field software, gives you a totally comfortable feeling of a good result.

The Bluetooth™ device, make S9 III Plus a fast and completely cable free one man system for every kind of topographic job.

1. Accuracy and reliability are generally subject to satellite geometry (DOPs), multipath, atmospheric conditions and obstructions. In static mode they are subject even to occupation times: the longer is the Baseline, the longer must be the occupation time.
2. Depends on SBAS system performance.
3. Network RTK precisions depends on the network performances and are referenced to the closest physical base station.
4. Varies with the operating environment and with electromagnetic pollution.
5. Depending on the connection mode (cable or BT).
